DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tatiana Rossin on October 10, 2006.

The application has been amended as follows:

In The Claims

1. (Currently Amended) A method, comprising measuring packet round trip times within a communication network, organizing numbers of occurrences of the packet round trip time measurements as an invariant distribution; applying an analytical tool to the invariant distribution to derive a plot exhibiting periodic peaks; and extracting information from the periodic peaks to evaluate regarding congestion conditions within the network, wherein the extracting the information to evaluate regarding the congestion conditions includes determining a bandwidth of one or more communication links from the periodic peaks.
10. (Currently Amended) A method, comprising controlling inter-packet transmission times at a node of a communication network according to congestion conditions within the network, the congestion conditions being determining by measurement of packet round trip times within the network; organizing numbers of occurrences of the packet round trip time measurements as an invariant distribution; applying an analytical tool to the invariant distribution to derive a plot

exhibiting periodic peaks, and extracting a bandwidth information to evaluate regarding one or more congested links within the network from the periodic peaks.

16. (Currently Amended) A method comprising estimating congestion conditions in a communication network from bandwidth bottleneck information obtained through a plot exhibiting periodic peaks, the plot derived from an invariant distribution of numbers of occurrences of measurements of packet round trip times within the network applied with an analytical tool, wherein the bandwidth bottleneck information to evaluate regarding the congestion conditions includes determining a bandwidth of one or more communication links from the periodic peaks.

Allowable Subject Matter

2. Claims 1, 4-5, 7-10, 12-13, 15-17, and 19-20 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art does not teach or fairly suggest organizing numbers of occurrences of packet round trip time measurements as an invariant distribution, applying an analytical tool to the invariant distribution to derive a plot exhibiting periodic peaks; extracting information from the periodic peaks to evaluate regarding congestion conditions, wherein the extracted information to evaluate regarding the congestion conditions includes determining a bandwidth of one or more communications links from the periodic peaks, as specified in independent claims 1, 10, and 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

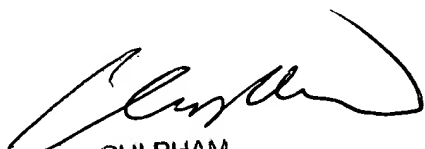

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anh-Vu H. Ly whose telephone number is 571-272-3175. The examiner can normally be reached on Monday-Friday 7:00am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chi Pham can be reached on 571-272-3179. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
